our Mission

Optimum vision from front fork tip to rear

Effective camera/monitor solutions for forklift trucks

What every forklift truck driver needs

Forklift trucks play a vital role in your logistics processes — you cannot do without them when moving goods. Their agility allows you to make the best possible use of expensive storage space. An experienced forklift truck operator can manoeuvre pallets and other packages into every available space. There is only one factor that limits how quickly and effectively the driver can work: his view. His view of the fork position, his view on the load, his view of the immediate surroundings of the forklift truck. There is a lack of visibility, especially if the forklift truck is fitted with attachments such as a fork clamp, rotator or paper roll clamp.

Prevent damage, work safer

In order to avoid damage to goods (or accidents), the operator needs a good view to the front and rear. That's an excellent reason for you to find out about vision solutions from Orlaco. We have developed a camera and monitor system that helps the forklift truck operator to work more safely, quickly and comfortably. It is all about focusing on quality when moving goods.

360-degree vision around the forklift truck

The Orlaco camera for forklift trucks provides a crystal-clear image of the truck and/or the surrounding area. Would you like to check the position of the forks? Would you like to see what is alongside and in front of the load? Would you like a good view of the area around the truck? Would you like to see at a glance what is going on behind the truck? If so, the camera/monitor system from Orlaco is the ideal solution for you. The operator can view the required locations on a colour monitor, and he has a wealth of options available to him. For example, the image from the rear-view camera can be shown automatically when reversing.

Handy for the operator

Orlaco cameras are specially designed with the roughest jobs in mind. They are shock-resistant and maintain a sharp image no matter the working conditions. Even in low light, the operator can still see the forks and the surrounding area. Not only does the monitor provide greater visibility, it also eases the strain on the operator. There is no longer any need to twist and turn to look forwards, backwards and up: The monitor is positioned within the operator's natural field of vision, allowing him to work more quickly, efficiently and comfortably.

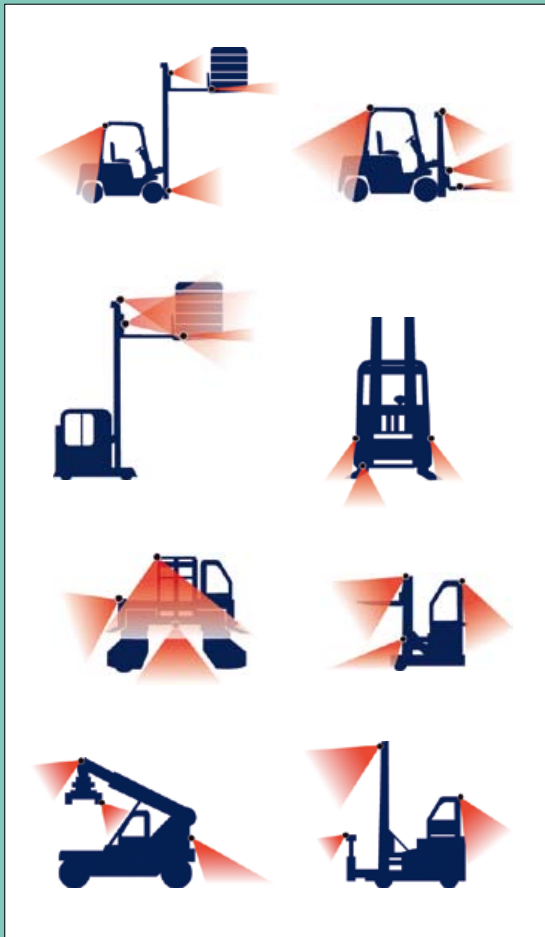

Orlaco - a helping hand

To help people work safely, effectively and in comfort thanks to optimum vision in and around vehicles and ships. That has been Orlaco's mission since 1988. We fulfill that mission through combining innovation and quality by integrating new technology into tried-and-tested solutions and by using proven technology in new solutions. In recent decades, we have developed camera and monitor systems for applications such as lorries, ships, cranes, forklifts, earth-moving equipment and military vehicles.

Quality processes, quality products

It takes a specialist to develop and manufacture a camera for forklift trucks. Since its very inception, our organisation has been characterised by innovation and a focus on quality. Our vision solutions can be adopted for various types of lift trucks, including forklift trucks, reach trucks, side loaders and container handlers. It is no coincidence that market leaders in the field of lift trucks opt for Orlaco products. OEMs, dealers and end users rely on us as a committed partner keen to share ideas, and see us as a major player that knows how to exceed the expectations of customers and operators. Experience it for yourself.

Orlaco, a smart solution!

Orlaco is specialised in solving visibility problems in all sorts of situations, ranging from commercial vehicles (trucks) to ships, tower-cranes, forklifts etc. Our unique camera systems support companies and their employees in their daily work, helping make tasks easier, safer and more efficient. Orlaco is an ISO9001-2000 certified company and is continuously working towards delivering superior quality products. The use of an Orlaco camera visibility system not only makes working with forklifts easier but also will quickly show the added advantages of an increase in work efficiency and overall safety in a company. This system will quickly show the benefits of your investment.

Invest in an Orlaco system, for you and your employees!

- Increase in efficiency
- Increase in safety
- Decrease in sick leave
