Specialised Camera Solutions

DAF

Vision fields specified by European directive 2003/97/EG

Front view

New blind spot definition

The arrival of increasingly high heavy goods vehicles on our roads has aggravated the blind spot problem and forced the European Union to introduce new traffic safety measures. The new description of the hazard zone not only defines the areas towards the front and at the side of the vehicle as blind spot areas, it now also includes the area directly in front of the vehicle.

Modified mirror radius

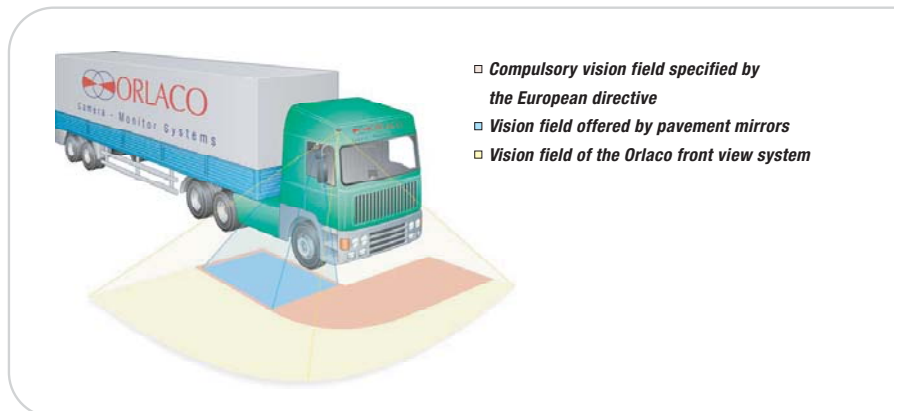

The suggested solution consists of a modification of the width and pavement blind spot mirrors in combination with a front view device. Extra mirrors and a smaller mirror radius (reduced from 400 mm to 300 mm) expand the field of vision, but also increase the number of viewing devices the driver has to monitor.

Front view

The front vision system provides an excellent field of vision directly in front of and to the sides of the vehicle. Moreover, the Orlaco camera system satisfies European directives, eases vision device monitoring workload as there are fewer mirrors and reduces the risk of accidents. The system is also more cost effective and increases driver satisfaction. It is also easy to expand the front vision system by adding a rear view camera.

The three main benefits offered by Orlaco vision solutions are:

- Enhanced convenience and safety for the driver as he can monitor all his blind spots with less effort.
- Less accident damage, meaning lower downtime, reduced costs and greater peace of mind.
- Easy integration in the cabin; Orlaco's single compact monitor fits neatly and easily in the cabin.

- Compulsory vision field specified by the European directive
- Vision field offered by pavement mirrors
- Vision field of the Orlaco front view system

The organisation behind this novel solution

Orlaco is a Dutch company that has supplied effective vision solutions in the form of camera/monitor sets for DAF vehicles for sixteen years. Orlaco now leads the market and has won national and international repute for its expertise, ability to offer custom products and certified quality.

The company's own organisation and the extensive and effective dealer and distribution network of DAF Trucks and DAF Nederland ensure proper product specification and on-time delivery. This has resulted in a large, well-satisfied customer base in the Netherlands.
